INT. PATENT CLASSIF.: C05G003-04; C09K017-00

BASIC ABSTRACT:

DE 3344638 A UPAB: 19930925

Compsns. for improving soil quality by increasing the amt. of water or aq.
nutrient soln. retained by the soil in a form readily assimilable by plant
roots comprise 60-80 (esp. 70) wt.% of a nonionic polyacrylamide and 20-40
(esp. 30) wt.% of an anionic Na acrylate polymer crosslinked with 200-400
(esp. 300) ppm N, N'-methylene-bisacrylamide.

ADVANTAGE - The compsns. have high water-swellability, high water
storage and desorption capacity, and do not significantly decompose in the
soil.
